SKILLS AND SUMMARY

I am a network engineer with a strong background in implementing and maintaining complex information technology infrastructures. I am always learning new things and trying to improve my skillset.

- Cisco CCNA, Aruba ACP-CA, Aruba ACP-NS, Aruba Certified Architect, Fortinet FCP-FA, Amazon CCP, CompTIA Network+, and Security+ certified.
- Experienced in the configuration and administration of network devices from all major brands.
- Skilled in firewall reporting and trend analysis, as well as overall network security analysis.
- Proficient in virtualization, cloud computing, Windows/Linux command-line, malware or vulnerability analysis, and Active Directory.
- Highly skilled in resolving tickets using ConnectWise, IDIL, NOVA and Service Now.
- Excellent interpersonal and communication skills, with the ability to work independently in a fast-paced environment.

EXPERIENCE + RESPONSIBILITIES

APRIL 2022 – Present / Network Engineer / United Systems, Inc.

- Perform end-to-end network, VoIP, server, and security upgrades across a wide variety of clients, from public-school districts to large private organizations.
- Architect and implement complex, multi-vendor networking and IT solutions, working with a variety of major infrastructure brands.
- Apply industry standard practices throughout IT infrastructures in a variety of environments, focusing on stability, performance and security.
- Coordinate large projects with multiple vendors and moving parts, ensuring that all targets and deadlines are hit.
- Apply patches and updates throughout managed environments, with a focus on ensuring stability and performance during and after the process.
- Collaborated with multiple teams to perform security incident response and conduct forensic investigations, identifying the root cause of security breaches and implementing corrective measures to prevent future incidents.
- Lead escalation point for troubleshooting of switching, routing, access and security issues.
- Document and communicate overall IT infrastructure and analyze opportunities.
- Troubleshooting, resolving, and communicating networking issues to clients, other employees and management.
- Maintain end-to-end communication with clients, from planning through support stages.
- Perform complex system-wide upgrades while minimizing downtime.
- Configure, test, and maintain LAN/WAN equipment from a variety of vendors, such as Cisco, Dell, Aruba and Fortinet.
- Monitor computer systems to improve network performance for all systems and use cases.
- Served as the primary expert for diagnosing and resolving complex network and server-related issues, including handling service tickets, managing escalations, and contributing to the successful execution of infrastructure projects.
